10 June 2021

Ref: **IWA/COSS/PC Key Points NR9925 Issue 13**

**To all Sponsor, Training & Assessment Providers, Line Managers**

A new enhanced version of the NR9925 Key Points has been produced with industry support and collaboration.
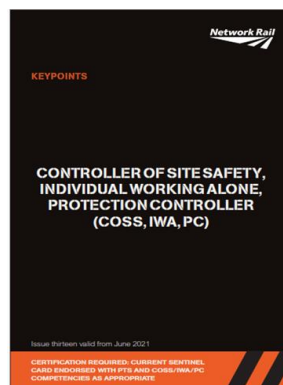

The new issue was required to give our trackworkers enhanced guidance on new processes and systems that are available to help provide safe systems of work. Version 12 was recently correctly closed called and contradicted a Rule Book requirement

The new version now contains a contents page to find items quicker.

New diagrams to demonstrate Approach and Beyond

Practical advice on the use of:

- Crossing the Line Procedure
- Lock Out Devices
- Runaway Risk
- Semi-Automatic and Automatic Warning Systems
- Train Operated and Train activated Warning Systems
- Practical Guidance for Protection Controllers (PCs)

We are asking you to dispose of all existing version 12 and older of the IWA/COSS/PC key points and only use and issue this new version.

They can be ordered via Willsons Printers
