

## Arranging Installation

All vehicles will be installed with the VTS system at selected installation sites within your region. Your line manager will be in contact with you to arrange the fitting at a suitable location and you will be given a time slot to attend or to make the vehicle available.

## During Installation

Before installation, drivers will need to make sure the cab and dashboard are free from any loose items to allow the engineer to install the VTS correctly. During installation, drivers will be required to attend the allocated installation site at the time slot provided. When on site, drivers will be briefed on the installation before the fitting commences.

To maintain site safety, drivers will be required to leave the vicinity of the vehicle during installation but make it clear of their location so a full handover can be completed once the VTS is installed.

The installation of the VTS should take around 1 hour. Drivers will be provided with their log in details and a fold out user guide, to assist you in making the most of the system.

## Support after Installation

Once the VTS has been installed you will be supplied with a fold out user guide as well as an online tutorial on the VTS. If you find you still require support, please speak with your line manager or alternatively email [safetycommunications@networkrail.co.uk](mailto:safetycommunications@networkrail.co.uk) where we will be happy to assist you.
