

Aero AED[®]

Certificated AED, Basic Life Support & CPR Training Onsite

Introductory First Aid and AED Use

This course is aimed at anyone who requires a course in AED use. Learning AED skills is becoming more important with the increase in the numbers of units in the community and workplace. They are easy to use with a little training and make a real difference in the chance of survival to someone in cardiac arrest. If you have already completed any other first aid course, you will understand the importance of prompt use of an AED making this an ideal next course to take to develop your skills. To renew, complete the same course again.

The content of this and all our courses has been independently certified as conforming to universally accepted Continuous Professional Development (CPD) guidelines and comes with a Certified CPD Statement as well as a Aero Healthcare Certificate.
