

On-Track Plant Operations Scheme (POS) - Update

Provision of Machine Controllers/Crane Controllers – 12 March 2019

POS – On-Track Plant Operations, Section 6 of Module P521

With the introduction of NR/L2/RMVP/0200 issue 10 came a number of changes and improvements to Module P521-POS. These changes were consulted and agreed to address a number of industry concerns, one of which was in regard to machine controller/crane controller (MC/CC) competency and behaviour. A change has therefore been introduced which places the choice, selection and supply of MC/CC's under the full responsibility of POS providers.

POS – On-Track Plant Operations, Section 6 of Module P521

To clarify the requirement in POS, the purpose and intent of the new clause is as follows:

The POS provider must supply the OTP personnel including the MC/CC as part of a fully inclusive POS service. The POS provider (not the PC) must source the MC/CC from their own supply chain. The MC/CC may be an employee, or from agency labour, but it is the POS providers sole responsibility to select, procure and deploy the MC/CC. POS Providers must meet the requirements of clause 5.10 and 5.13 in the management and selection of the OTP personnel they supply.
